III. INVESTMENT STRATEGY

Dovre Inside Nordic

An actively managed mutual Subfund whose purpose is to achieve returns on investments greater than the ones of the chosen benchmark index by investing in attractive companies listed in Nordic countries (Denmark, Norway, Sweden, and Finland). The main method for choosing in which companies to invest is by tracking related persons* (hereinafter - *insiders*) transactions. It is believed that insiders have the advantage of information that is revealed by their transactions (of which the public stock exchanges inform).

To indicate which sector's or what size companies insiders will do most transactions is practically impossible, therefore, in implementing this strategy large fluctuations in net assets are possible.

It is likely that the Subfund's assets will be invested mainly in shares, but the Subfund may also invest in varying lengths and different grade companies' debt securities and derivative financial instruments to manage currency risk. In order to ensure liquidity, the Subfund will keep cash position, which can be invested in short-term highly liquid money market instruments: deposits, short-term government securities, money market funds. The Subfund does not set limits for individual regions or sectors, therefore, there may be periods when the risk increases with certain narrow asset classes, industry sectors and geographical distribution.

* Related person (*insider*) - a natural person working for the company, including CEO, partners, or any other person holding an analogous position, or persons, directly or indirectly related to the company's control. As well as persons who have close relationship with the company's insiders, or there is reason to believe that such persons have a close relationship with the company's insiders.
